

European smut fungi (Ustilaginomycetes p.p. and Microbotryales) according to recent nomenclature

Kálmán Vánky

Herbarium Ustilaginales Vánky (H.U.V.), Gabriel-Biel-Str. 5, D-72076 Tübingen, Germany (e-mail: vankv.k@cityinfonet.de)

Received 13 April 2005 / Accepted 26 April 2005

Abstract. The 470 smut fungi, published in the book *European smut fungi* by Vánky (1994), and a further fourteen species, missed or recorded after 1994, are listed according to their recent nomenclature. Extensive changes in the classification and nomenclature of the smut fungi has resulted in changed generic names of one third of the European smut fungi since 1994.

Key words: check-list, Europe, Microbotryales, recent nomenclature, smut fungi, Ustilaginomycetes p.p.

Introduction

Europe is the continent of which the smut fungus mycota is the best known of all continents. It was synthetized and published in the book *European Smut Fungi* (Vánky 1994; 570 pp., over 1000 illustrations). In it, the 400 recorded smut fungi, belonging to 28 genera, are presented. A further 70 species and 3 genera are also described. They represent smuts which were so far not collected in Europe but are expected to be present because their host plants occur there.

The application of ultrastructural and molecular biological methods during the past eleven years has brought radical changes to the classification and nomenclature of the smut fungi. The ca 1450 known “classical” smut fungi of the world (those possessing teliospores) are presently classified into two classes, three subclasses, 8 orders, 26 families, and 83 genera (cfr also Bauer *et al.* 1997, 1998, 2000; Begerow *et al.* 1998; Vánky 1999b, 2001b, 2002).

Of the larger genera no, or only little, change on generic level was made to the genera *Anthracoidea*, *Entorrhiza*, and *Urocystis*. However, in the genera *Cintractia*, *Tilletia*, the dark-spored *Entyloma-Melanotaenium* complex, and especially in the heterogeneous *Ustilago* a considerable number of changes were made. It was demonstrated that species of *Ustilago* are restricted to host plants in the Gramineae. Those on other host

families were transferred into already existing and also into several new genera. As a result of these complex investigations, the following new genera were published during the last eleven years: *Ahmadiago* Vánky (Vánky 2004a: 102), *Aurantiosporium* M. Piepenbr., Vánky & Oberw. (Piepenbring *et al.* 1996: 62), *Bauerago* Vánky (Vánky 1999b: 44), *Doassinga* Vánky, R. Bauer & D. Begerow (Vánky *et al.* 1998: 965), *Eballistra* R. Bauer, Begerow, A. Nagler & Oberw. (Bauer *et al.* 2001: 423), *Erratomycetes* M. Piepenbr. & R. Bauer (Piepenbring & Bauer 1997: 930), *Exoteliospora* R. Bauer, Oberw. & Vánky (Bauer *et al.* 1999a: 675), *Farysporium* Vánky (Vánky 1999c: 208), *Fulvisporium* Vánky (Vánky *et al.* 1997: 59), *Geminago* Vánky & R. Bauer (Vánky 1996: 182), *Gjaerumia* R. Bauer, M. Lutz & Oberw. (Bauer *et al.* 2006, in press), *Heterotolyposporium* Vánky (Vánky 1997a: 144), *Ingoldiomyces* Vánky (Vánky & Bauer 1996: 279), *Kochmania* Piatek (Piatek 2005: 34), *Leucocintractia* M. Piepenbr., Begerow & Oberw. (Piepenbring *et al.* 1999: 496), *Lundquistia* Vánky (Vánky 2001a: 371, = *Sporisorium* – cfr Cunningham *et al.* 2005), *Melaniella* R. Bauer, Vánky, Begerow & Oberw. (Bauer *et al.* 1999b: 482), *Melanustilospora* Denchev (Denchev 2003: 476), *Oberwinkleria* Vánky & R. Bauer (Vánky & Bauer 1995: 363), *Phragmotaenium* R. Bauer, Begerow, A. Nagler & Oberw. (Bauer *et al.* 2001: 423), *Pilocintractia* Vánky (Vánky 2004b: 172), *Pseudodermatosorus* Vánky (Vánky 1999c: 213),

Pseudotracya Vánky (Vánky 1999c: 216), *Restiosporium* Vánky (Vánky 2000: 346), *Stegocintractia* M. Piepenbr., Begerow & Oberw. (Piepenbring *et al.* 1999: 496), *Tothiella* Vánky (Vánky 1999b: 39, = *Thecaphora*), *Trichocintractia* M. Piepenbr. (Piepenbring 1995: 1095), *Ustanciosporium* Vánky (Vánky 1999a: 31), *Vankya* Ershad (Ershad 2000: 66), *Websdanea* Vánky (Vánky 1997b: 184), and *Yelsemia* J. Walker (Walker 2001: 225). Most of these genera are not represented in Europe. Despite this, nearly one third (31 %) of the European smut fungus species have had their names changed.

To bring the nomenclature of the European smut fungi to the present level of knowledge, a list of the European smut fungi with authorship was completed. The valid names are in bold face. Species still not recorded in Europe but treated in the book are marked with an asterisk. Further fourteen species, missed in the book "European smut fungi", or recorded after 1994, are also listed.

List of European smut fungi

Ahmadiago

**A. euphorbiae* (Mundk.) Vánky (as *Ustilago euphorbiae*)

Anthracoidea

A. altera Nannf.

A. angulata (Syd.) Boidol & Poelt

V. vaillantii (Tul. & C. Tul.) Ershad (as *Ustilago vaillantii*)

Zundeliomyces
**Z. polygoni* Vánky

Additions to the European smut fungi (missed or recorded after 1994)

Eballistra oryzae (Syd. & P. Syd.) R. Bauer, Begerow, A. Nagler & Oberwinkler (2001: 423). — *Entyloma oryzae* Syd. & P. Syd. (1914: 197). — Type on *Oryza sativa* L., Philippine Islands, Laguna Prov., Los Banos, 20 Dec 1913, M.B. Raimundo (C.F. Barker, no. 2203). It was reported by Uljanishchev (1968: 104) from the European part of Russia, Krasnodar.

Entyloma bergeniae Vánky & Döbbeler on *Bergenia ?crassifolia* (L.) Fritsch., Germany (in Vánky 2005: 252).

Entyloma chaenorrhini Sousa da Camara & & Vasconcelos (1953: 185). — Type on *Chaenorrhinum origanifolium* (L.) Fourr. (Scrophulariaceae), Portugal, near Sacave, National Agronomical Research Fields, Feb 1953, B. de Oliveira, P. & M. da Silva.

Entyloma holwayi Syd. & P. Syd. on *Cosmos bipinnatus* Cav., Germany (Vánky et al. 2005).

Microbotryum jehudanum (Zundel) Vánky on *Silene colorata* Poiret, Spain (Vánky et al. 2005).

Microbotryum silybum Vánky & Berner on *Silybum marianum* (L.) Gaertner, Greece (Vánky & Berner 2003: 308).

Moreaua apicis (Savile) Vánky on *Carex pyrenaica* Wahlenb., Mt. Pyrénées (Vánky 2003: 57).

Schizonella intercedens Vánky & A. Nagler, in Vánky (1998: 105). — Type on *Carex michelii* Host. In various European countries.

Sporisorium erianthi (Syd. & P. Syd.) Vánky on *Tripidium ravennae* (L.) H. Scholz, Greece (Vánky et al. 2005).

Sporisorium consanguineum (Ellis & Everh.) Vánky on *Aristida caerulescens* Desf., Greece (Herb. B.).

Tilletia catapodii H. Scholz & Vánky, in Vánky & Scholz (2001: 392). — Type on *Catapodium rigidum* (L.) C.E. Hubb., Greece, Halkidiki, 22 May 1991, J. Diamantopoulos.

Tilletia laguri G.M. Zhang, G.X. Lin & J.R. Deng on *Lagurus ovatus* L., Italy, Spain (Herb. Ustilag. Vánky).

Tranzscheliella sparti (Massenot) Vánky on *Lygeum spartum* L., Italy, Spain (Almaraz & Telleria 1998, as *Ustilago sparti*).

Ustilago sleumeri Petrak (1947: 206). — Type on *Alopecurus gerardii* Vill., Andorra, East Pyrenean Mts, between Port d'Embalire and Pic Negre, above the creek Ariège, 2200-2500 m, July (1944), coll. H. Sleumer. Material not seen. It may represent a folicolous *Tilletia* species.
